

We Create **Deflationary Prevention Mechanism With safesol Protocol**

No Rugpull , Dump Prevention Mechanism , Transparency and Trust!

Overview

The DeFi space has exploded in the recent months. Yield Farming, Staking and Liquidity Mining have taken the space by storm, with participants earning by basically "locking" their tokens for a time.

While generally great, these concepts have one downside: impermanent loss (IL). If you are farming/staking and the value of the underlying token changes significantly, even though you still get rewards, the value will far less than if you simply held your tokens.

The SAFESOL smart contract applies a 5% fee on all transactions (buys/sells). Out of this, 2% is automatically distributed to holders, without farming! This means the amount of tokens in your wallet will forever increase as people transact. This way IL is avoided altogether and in effect you get paid for just holding SAFESOL.

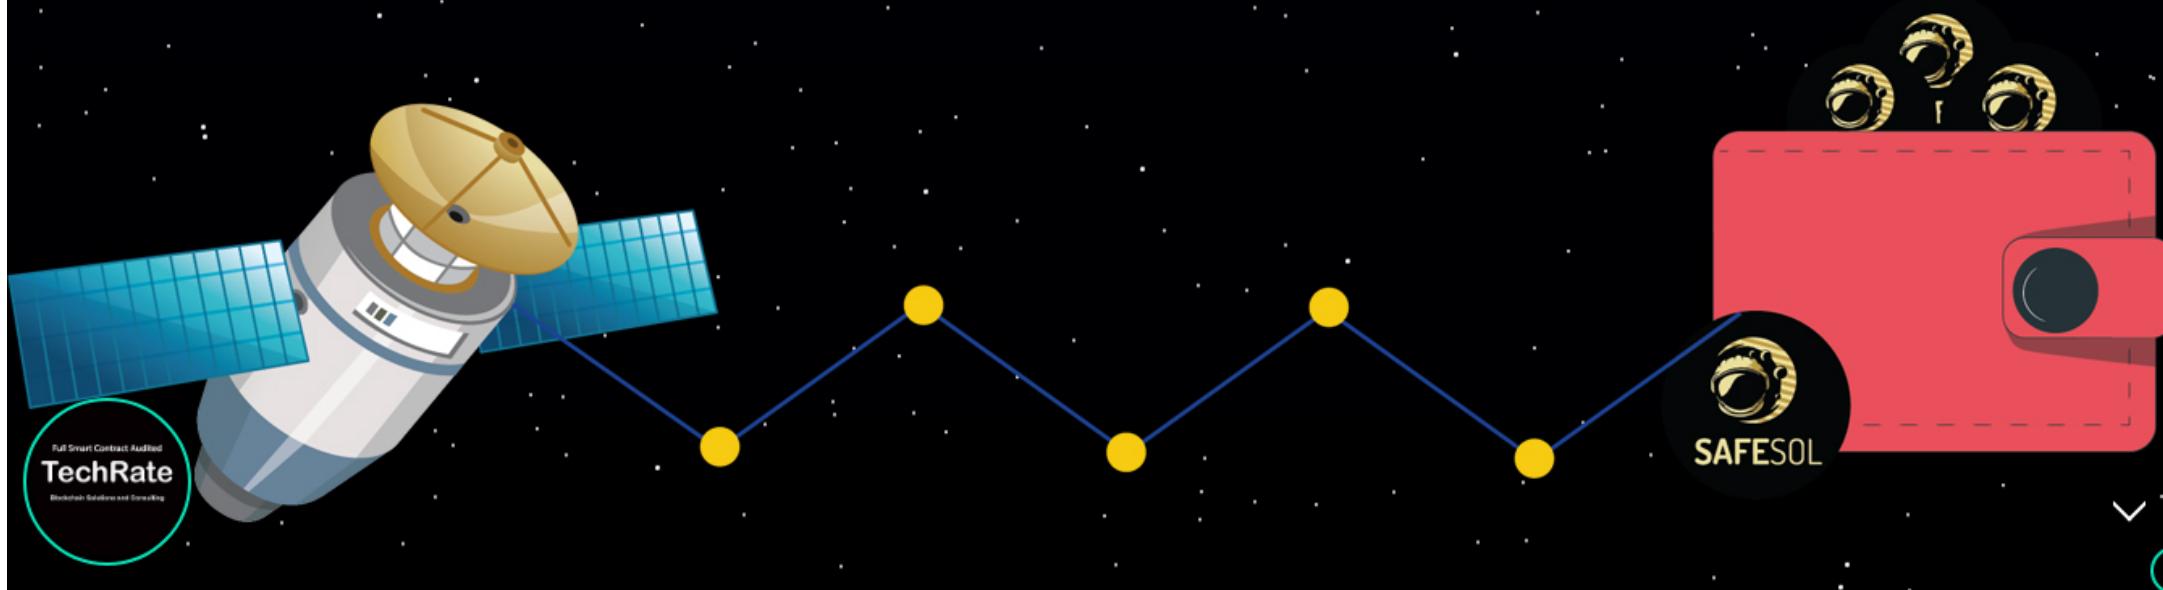

In addition, the SAFESOL smart contract also takes 3% of each transaction and automatically adds it to the liquidity pool. The liquidity pool will continuously increase, which leads to a higher price floor of SAFESOL.

This is what SAFESOL aims to accomplish:

You don't have to farm, stake or deposit your SAFESOL.

Simply hold it in your wallet and you will get more!

Overview

SAFESOL is an autonomous yield and liquidity generation protocol that aims to directly reward its holders whilst concurrently increasing liquidity.

This is funded by a 5% tax taken from each and every transaction.

Consequently, the protocol has a permanently increasing price floor, with all investors earning additional SAFESOL tokens just for holding.

50%

Distributed proportionally
Across existing holders

50%

Transformed into BNB/SAFESOL LP
Tokens, and added to liquidity

Reflection

SAFESOL resides within a class of token that rewards investors just for holding, the amount of rewards received increases over time the longer an investor holds for.

Holders are also rewarded for the success of SAFESOL with higher transaction volumes leading to increased fees, and rewards for distribution.

We believe this mechanism provides investors with an active stake in SAFESOL success!

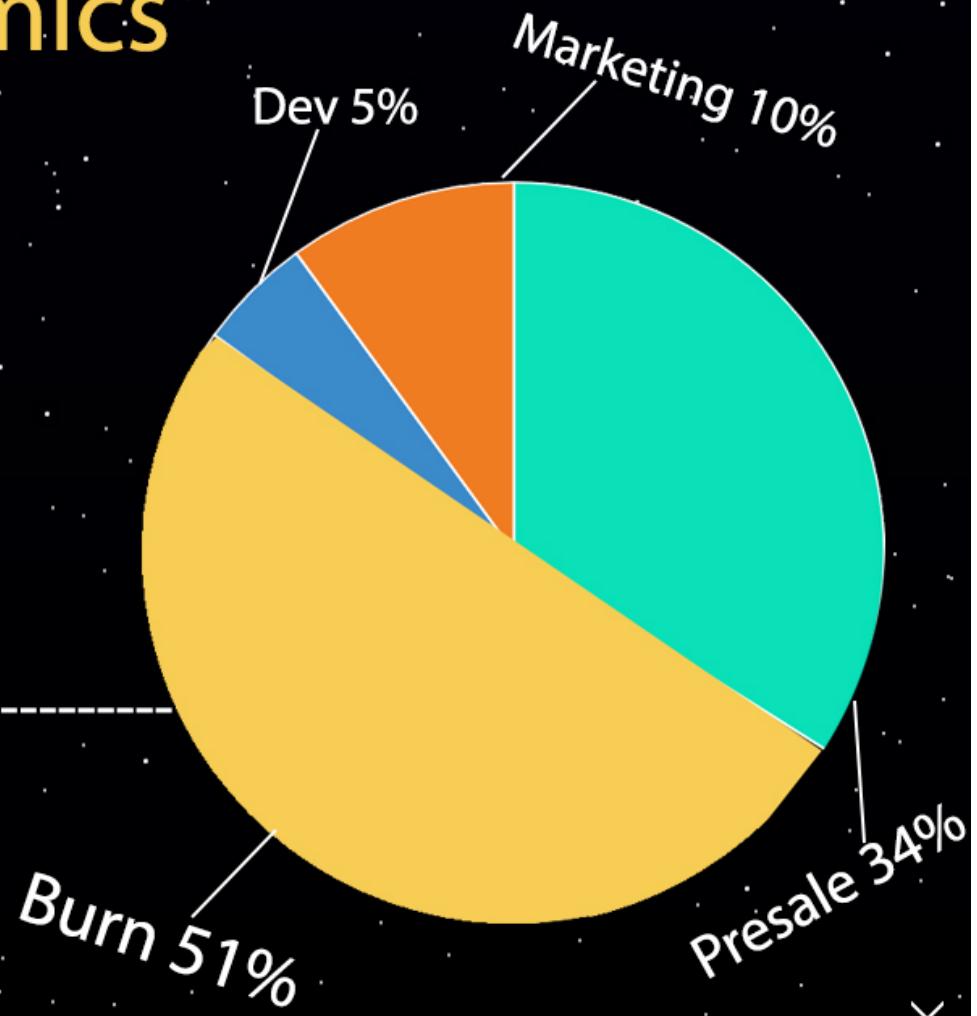

Tokenomics

Symbol: \$SAFESOL

Total Supply: 1.000.000.000.000.000

Token distribution display

Token Burn

Following launch, 51% of the total supply of SAFESOL was sent to the black hole address, permanently reducing the supply.

Black Hole Address: 0x00000000000000000000000000000000dead

As the black hole address is classified as a SAFESOL holder it also receives a share of each transaction fee. Each share is burned leading to a persistently reducing circulating supply of SAFESOL.

Liquidity Locking!
Constantly!

Liquidity Locking

To ensure that SAFESOL is unruggable, we continuously "burn" these tokens, thereby locking liquidity forever. The burns are completely transparent, visible on the blockchain, and performed daily.

Liquidity Locking for every Transactions.

Safety

We take the **safety of holders funds extremely seriously**, and therefore **we have taken** the following measures to protect our community:

Regular Burns of All
New Protocol
Generated LP Tokens

Initial LP Token Burn

5% Team Wallet
Allocation

Contract Audited Fully with
Industries Top most TechRate

No minting function
Anymore for Increasing
SAFESOL

Fairly Distribution on Presale. No
Presale Wallets will held $> 1\%$

SAFESOL is therefore unruggable, with no single holder able to mint new tokens, remove
Protocol Generated liquidity, or dump presale allocations on the market.

Our crew

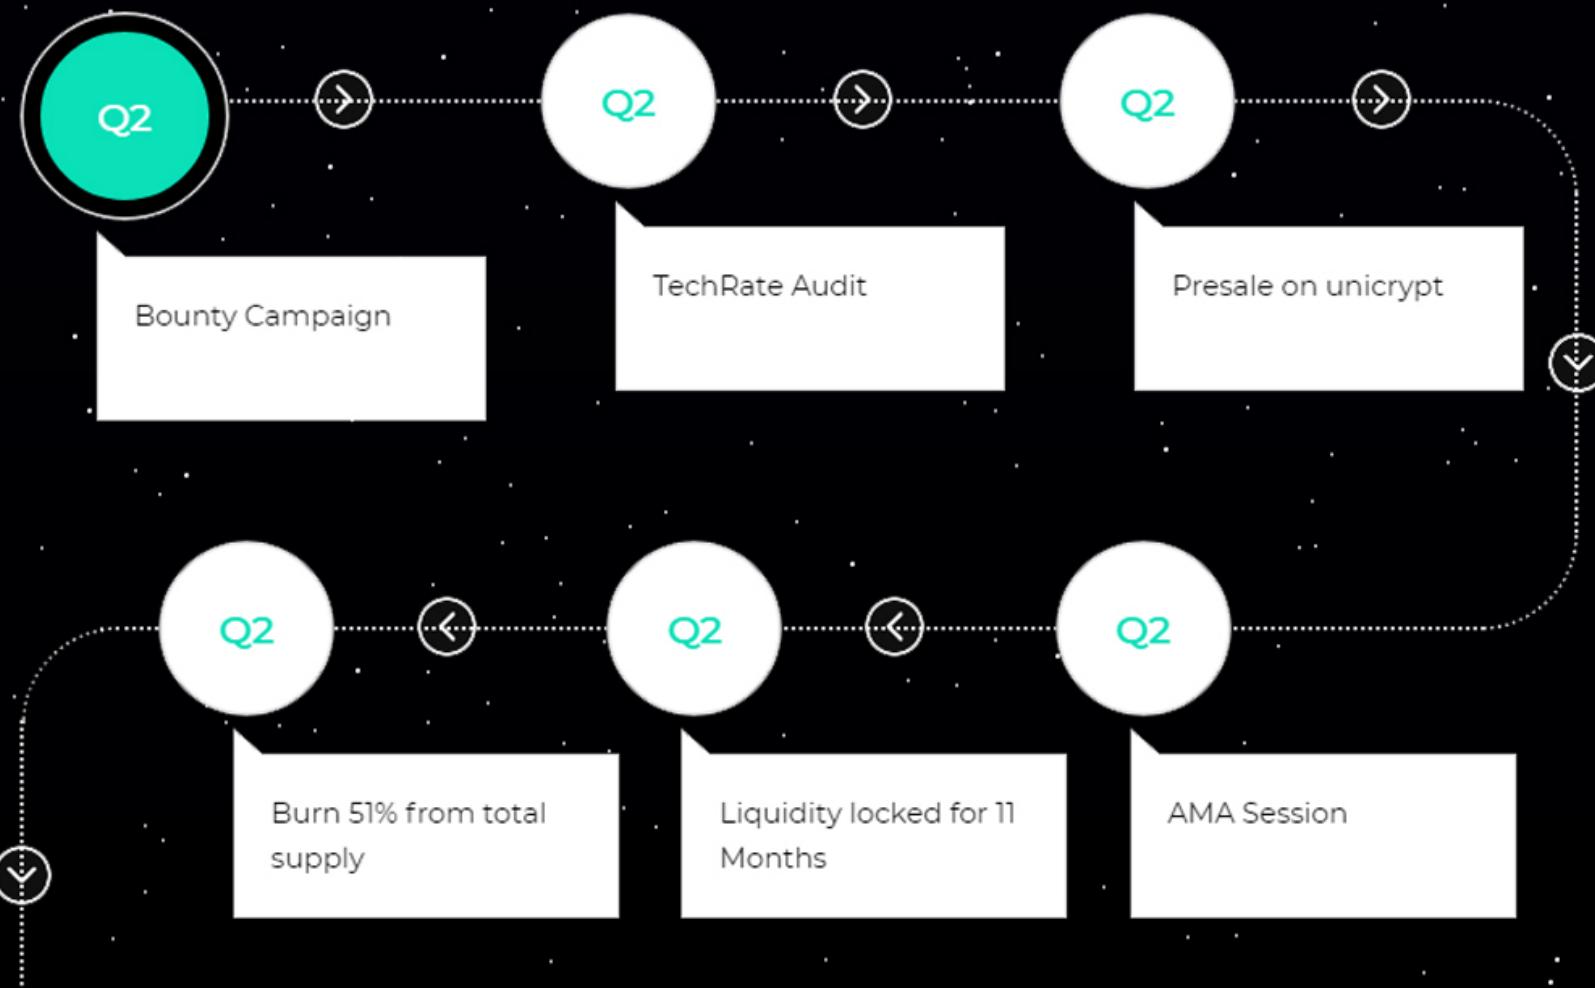

Access to the team wallet is held solely by the developer:
@Michaelrryn

SAFESOL is community owned, and the team is made up of a decentralised group of volunteers from all across the world.

If you would like to join us please say hello in our discord and telegram channels.
Welcome Board!
